

# SOUND

# WAVES

1

## Sound

- A source, like a speaker, compresses air molecules at regular intervals, creating differences in pressure over time.
- This creates a \_\_\_\_\_

2

# Speed of Sound

- The speed of a sound wave depends on the

Speed of sound in various substances (CRC Handbook)

Gasses (0°C)	Substance	Speed of Sound (m/s)
Carbon Dioxide	259	
Hydrogen	1284	
Helium	965	
Nitrogen	334	
Oxygen	316	
Air (21% Oxygen, 78% Nitrogen)	331	
Air (20°C)	344	
Liquids (25°C)		
Glycerol	1904	
Sea Water (3.5% salinity)	1535	
Water	1493	
Mercury	1450	
Kerosene	1324	
Methyl Alcohol	1103	
Carbon Tetrachloride	926	
Solids		
Diamond	12000	
Pyrex Glass	5640	
Iron	5960	
Granite	6000	
Aluminum	5100	
Brass	4700	
Copper (annealed)	4760	
Gold	3240	
Lead (annealed)	2160	
Rubber (gum)	1550	

3

# Speed of Sound

- Speed of sound in air = 331 m/s @ 0° C
- In air, speed increases 0.6 m/s for each 1°C increase in temperature
- Velocity at any temperature can be found using: \_\_\_\_\_
- Follows all properties of waves including:  
\_\_\_\_\_
- Wavelength, \_\_\_\_\_, changes when a wave changes speed

4

## Speed of Sound Example

- A 281 Hz sound wave travels through 33.0°C air. What is the wavelength of the wave?

5

## Speed of Sound Example #2

- A sound wave has a frequency of 225.0 Hz and a wavelength of 1.55 m. At what temperature is this wave traveling?

6

## Pitch

- How high or low the perceived sound is
- Based on the frequency of sound
  - High frequency = \_\_\_\_\_ pitch
  - Low frequency = \_\_\_\_\_ pitch

7

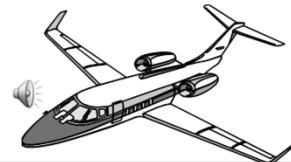

## Pitch – the sound spectrum

- Humans can hear frequencies between 20 Hz and 20,000 Hz. These are called the audible sound waves.
- Sounds below 20 Hz are called \_\_\_\_\_.
- Sounds above 20,000 Hz are called \_\_\_\_\_.
  - Used for medical imaging and echolocation

8

## Doppler Effect

- Frequency shift that is the result of relative motion between the source of waves and an observer.
- Occurs with all wave motion
- Frequency gradually increases as the source approaches, then suddenly drops to a lower pitch as the source passes and moves away.

9

## Doppler Effect

- Here's why

- The source of the sound actually catches up to its own sound waves

• Example
